

# Want to study engineering but don't meet the entry requirements?

Students in this situation can consider applying for a degree called the **Bachelor of Mathematical and Computer Sciences**. This flexible degree provides the opportunity for students to build the prerequisites and/or entry score required for engineering through the successful completion of equivalent coursework and then apply to transfer\* into their preferred engineering degree.

Students who believe they will meet the requirements for entry into their preferred engineering degree should consider the **Bachelor of Mathematical and Computer Sciences** as a "backup" preference, just in case things don't go to plan.

For further details on pathways to engineering at the University of Adelaide, students are encouraged to visit [www.ua.edu.au/engineering/pathways](http://www.ua.edu.au/engineering/pathways) and email [ecms\\_outreach@adelaide.edu.au](mailto:ecms_outreach@adelaide.edu.au) to discuss their individual situation.
